## (54) HYDROCARBON COMPOUND, MATERIAL FOR ORGANIC ELECTROLUMINESCENT ELEMENT AND ORGANIC ELECTROLUMINESCENT ELEMENT

## (57)Abstract:

**PROBLEM TO BE SOLVED:** To provide an organic electroluminescent element which has excellent emitting efficiency and emits light at high intensity, and also to provide a new hydrocarbon compound which is preferably used for the electroluminescent element.

**SOLUTION:** This organic electroluminescent element includes between a pair of electrodes, at least one layer containing at least one hydrocarbon compound in which anthracene and fluorene rings which have respective groups having formula (I) [wherein, Ar<sub>1</sub> and Ar<sub>2</sub> are substituted or unsubstituted arylene group; and Z is a coupling group] are directly bonded to each other. This hydrocarbon compound is a compound in which anthracene and fluorene rings which have respective groups represented by formula (I) [wherein, Ar<sub>1</sub> and Ar<sub>2</sub> are each a substituted or unsubstituted arylene group; and Z is a coupling group] are directly bonded to each other.
